

MavBridge™ → Automated DEMs

Your Data—Just the Way You Need It

MavBridge™ provides a wide variety of Data Enrichment Modules (DEMs) to format your images and data exactly the way you need. Each module is a building block—use them individually, or combine them together to form a powerful, customizable solution.

Image Enhancement and Quality

Image Cleanup	Despeckle images to improve readability and reduce file size.
Image Crop	Extract just the critical area of a larger document.
Image Resample	Easily change the resolution of scanned images. Down-sample to reduce file size, or up-sample for compatibility with downstream systems.
Image Quality	Continuously monitor the quality of your scanned images. If quality degrades, operators and supervisors are alerted immediately.

Transaction Cleanup

Automatic Rotation	Scan intermixed portrait and landscape documents and let MavBridge rotate them automatically.
Page Reorder	Scan transactions in any order and allow MavBridge to order them properly.
Batch Filter	Easily remove unneeded pages or images from your batches. Reduce storage space and ensure that downstream systems receive only what they need.
Blank Page Detect	Automatically remove blank images. Reduce storage space and eliminate operator review of empty pages.

Data Capture and Indexing

Barcode Reader	Find and read 1D or 2D barcodes from any or all locations on your documents.
OCR Reader	Single or Multi-font OCR engines allow you to extract printed data.
Mark Sense	Read checkboxes or look for writing, such as address changes.

Custom Business Logic

MavScript™	Powerful, flexible scripting language allows complex actions to be performed automatically. Get custom logic without the aggravation of custom software installation.
Data Map	Create a simple “lookup table” to easily map your data to the proper values.

Tracking and Reporting

Electronic Audit Trail	Apply vital tracking information to any position or orientation on your images.
Batch Reporting	Create customizable end-of-batch reports, in PDF or TIFF formats.
Email Notification	Receive email alerts for every batch or upon user-specified conditions.

Each of the above modules runs automatically, requiring no user intervention. When combined together with Mavro Imaging's Document Classification and Indexing Suite, sites can achieve powerful, end-to-end solutions.

OUR COMMITMENT is to exceed every customer's expectation ... *continuously*
