MavBridge™ Best in Class Encryption

Data Security Is Not an Option. It's a Fundamental Element of Any Remittance or Document Imaging System

The headlines have been frightening ...

- *Facebook admitted that since 2012 it has not properly secured the passwords of as many as 600 million users.*
- *Citrix revealed that hackers gained access to the company's internal systems between October 2018 and March 2019.*
- *A massive data leak containing 885 million records was found unprotected on the website of First American Financial Corp, a leading title insurer for the U.S. real estate market.*

... and this is just the tip of the iceberg!

According to IBM's *2019 Cost of a Data Breach Report*, at over $8 million per incident, the United States is the most expensive country in which to have a data breach. Additionally, the average breach involves just over 25,000 records. So, as a Mavro user, how can you best protect your data?

Introducing the MavBridge™ Encryption Module

The powerful MavBridge™ Encryption Module provides exceptional data security using 256-bit AES encryption, which is an approved cryptographic method under the FIPS 140-2 Federal Standard. The module includes full encryption of batch data, images, and vital system databases. In addition, MavBridge™ supports robust network-level encryption, ensuring that all network communication between the Dashboard, Keying Station, Smart Track™, and Mavro Scanning Station Clients, regardless of where they are located, is likewise secure.

The high security of Mavro's Encryption Module comes at a modest cost when combined with the other security features embedded in MavBridge™, especially when compared to the expense of a potential breach. To learn more about MavBridge™ and our data security capabilities, please send us a note at info@mavroimaging.com or give us a call at 609-949-9010.

Two Opportunities to Join Us!

Florida Tax Collectors Association 90th Annual Educational Forum

The Florida Tax Collectors Annual Forum runs from August 25th – 29th in Orlando, FL. In celebration of the 90th anniversary of the event, please visit our Mavro experts and register for a fantastic giveaway! Bob Frank and Mike Tallitsch will be demonstrating how Mavro's remittance, forms, and document imaging solutions have helped counties of all sizes add flexibility, cost savings, and efficiency to their operations.

Stop by **Booth 207!** We'd love to discuss our latest automations and enhancements with you.

Ontario Municipal Tax and Revenue Association

Mavro is also proud to be a sponsor of the Ontario Municipal Tax and Revenue Association Fall Conference at the White Oaks Resort and Conference Center on September 8th – 11th. On September 10th at 11:40 am, Amanda Hales-Filey will present an overview of how Mavro is helping municipalities process tax payments more efficiently, improve their operations, and save money.

What We Do

Mavro provides a wide range of products and services from consulting to end-to-end payment, forms, and document processing systems that will efficiently address your unique challenges. If you are doing manual payment, forms, or document processing, have an outdated system that needs to be replaced, or have an automated system that needs to be made more efficient, contact Mavro Imaging.
